# **#SOEASY**

## LECHLER COLOR BOX

The ideal tool for a precise and rapid car colour identification

Caring about the differences!

### **COLOR BOX**

Manual colour search system composed of sprayed cards, periodically updated (twice a year) with all new colours and variants of the car sector. Launched onto the market since the 1980s, it has now reached its **6th edition** thoroughly renewed and available in two versions.

### **COLOR BOX** Easy

This colour collection presents cards arranged by "Car Manufacturer" and contains all main European car fleet colours and variants concerning models of the last 10-12 years.

Colours are divided into over 70 fans (of max. 100 cards each), which are easy to consult due to a practical ring.

The new edition has been completely revitalised in its format and mode of use: two different modules to position in the working area according different configurations make its use very "Easy".

#### **COLOR BOX** Chroma Flex

This colour collection presents cards arranged by "Colour" and contains over 8.000 car fleet colours and variants.

Colours are divided into over 90 fans (of max. 100 cards each), which are easy to consult due to a practical ring.

The new edition has also been completely revitalised in its format and mode of use: three different modules to position in the working area according different modes make its use very "Easy".

For both versions the well-established production process of sprayed cards (two-coat process with matt water-borne basecoat + UHS clearcoat), sizes and information printed on the back side of each colour chip have remained unchanged (including the bare code, which is very useful for an easy and prompt identification of the formulation), thus ensuring a constant updating also of previous editions.

There is no right process for all repairs, but there is a right process for every repair.
